

HIGH-FLOW INTAKE SYSTEMS

+8.17 hp

**K&N High-Flow Intake System
Adds 8.17 Horsepower to
2007 Jeep Wrangler**

The K&N High-Flow Intake System for the 2007 Jeep Wrangler 3.8L V6, (part no. 63-1553), increases horsepower by 8.17 hp at 4807 rpm over the Wrangler's stock configuration. To achieve more horsepower, K&N replaces the Wrangler's original intake assembly; including the air box, air filter and intake tube with an all-new intake design. The new system draws air through a K&N High-Flow Air Filter that increases airflow and filtering capacity, and never needs to be replaced. Protecting the chrome top cone-shaped air filter, and isolating it from engine heat, is a powder coated steel heat shield that replaces the Wrangler's stock air box. As it passes the filter, air travels through a larger diameter polyethylene tube that is formed and shaped, in the design phase, to drive a more laminar flow of air to the Wrangler's 3.8L V6 engine.

#63-1553

The 63-1553 is currently available where quality performance is sold and is backed by the same K&N Million Mile Limited Warranty® as all K&N OE Replacement Air Filters.

Part#	Application	Available	MSRP
63-1553**	2007 Jeep Wrangler 3.8L V6	Currently Available	\$375.00

*Steel legal in 50 states. **Street legal in most states. Not legal for street use on emissions controlled vehicles in the state of California.

K&N Engineering, Inc., with headquarters in Riverside, California, has been the world's leader in performance filter technology since 1969, serving the needs of the automotive, motorcycle, marine, industrial and military markets.
