HOLLEY 4150/4160 STUBSTACK

This stubstack is designed to be used on Holley square bore carburetors (4150/4160 models) that have had the choke horn milled off, and do not require the use of an air cleaner.

The full radius design helps to increase the airflow of the carburetor. The stack can also hold down the baseplate of a cold air scoop. This stubstack will not work with any K&N Custom Chrome Racing Air Cleaners.

DO NOT OVERTIGHTEN HOLD DOWN STUD! Use a nylon locking nut or loctite to ensure that the stud stays tight.
