

INSTALLATION INSTRUCTIONS

Part Number 85-2000

Congratulations, you just purchased a pair of K&N intake restrictors with an inside diameter of 29mm. These restrictors are to be used with part number RK-1000, the CIK-FIA approved K&N Kart Air Box. To properly fit these restrictors, minor modification of the K&N Kart Air Box is required. The drilling template below may be used to do so.

Drilling template

The provided template may be used to modify the K&N Kart Air Box. The original intake holes need to be modified to the size of the provided template in order to properly fit the K&N 29mm intake restrictors. After modification, press fit the restrictors in place until they lock.

NOTE: Each hole will need to be 1.5" in diameter. The center to center of the two holes is 2.0".
