K&N® Cabin Air Filters replace your vehicle's stock cabin filter with a reusable design that cleans and freshens incoming air. They are electrostatically charged to grab and hold dust particles. K&N® cabin air filters help control odors while they help capture most mold, mildew, fungus, spores, bacteria and germs. When they get dirty they can be cleaned and reused and best of all, they come with a 10 year/100,000 mile limited warranty.

When applicable, refer to owner's manual for manufactures installation/removal instructions. The following are helpful steps when replacing/servicing cabin air filter with K&N® cabin air filter.

1. Locate cabin air filter behind the glove box and remove top 2 bolts holding glove box in place. Fig. 1, 2 & 3
2. On the bottom of the glove box there are 2 more screws holding the glove box, locate and remove. Fig. 4
3. With screws removed, pull the glove box back and remove to expose cabin filter door. Remove the cabin filter door by squeezing the tabs on both top sides and remove dirty cabin filter. Fig. 5, 6 & 7
4. Once dirty cabin filter is removed clean any debris that might be present on the cabin filter housing.
5. Install K&N® Cabin Filter in air box making sure that the pull tab is in front (helps for removal of filter). Fig. 8
6. Reinstall cabin filter air box lid. With the Cabin Filter installed apply the K&N® Stop Decal. The decal will help notify others that this is a re-usable cabin filter.
7. Reverse steps 1-3 to complete cabin filter installation.
