## INSTALLATION INSTRUCTIONS

### 57-3020

**CHEVROLET**

1997-00 Corvette

V8-5.7L

**NOTE:** Due to close tolerances, the intake tube may rub the underhood installation.

### TOOLS NEEDED:
- Flat Blade Screwdriver
- 3/8" Wrench
- 7mm Wrench
- 10mm Wrench
- 1/8" Allen Wrench
- Ratchet
- Socket Extension
- 19mm Socket
- File
- Jig Saw
- Utility Knife
- Drill
- 3/16" Drill Bit
- 5/16" Drill Bit
- 3/4" Drill Bit

### PARTS LIST:

**NOTE:** Due to close tolerances, the intake tube may rub the underhood installation.

### TO START:

1. Turn off the ignition and disconnect the negative battery cable.

**NOTE:** Disconnecting the negative battery cable erases pre-programmed electronic memories. Write down all memory settings before disconnecting the negative battery cable. Some radios will require an anti-theft code to be entered after the battery is reconnected. The anti-theft code is typically supplied with your owner’s manual. In the event your vehicles’ anti-theft code cannot be recovered, contact an authorized dealership to obtain your vehicles anti-theft code.

2. Disconnect the mass air sensor electrical connection.

3. Disconnect the air temperature sensor electrical connection.

4. On models equipped with a fuel pressure regulator vacuum line, disconnect the vent from the intake hose.

5. On models equipped with a fuel pressure regulator vacuum line, disconnect the vent hose from the fuel pressure regulator vacuum tube.

6. On models equipped with a fuel pressure regulator vacuum line, detach the vent from the vent hose.
7. Disconnect the air injection vent hose.
8. Release the push clips that retain the stock intake tube to the upper radiator cover.
9. Loosen the hose clamp on the intake hose at the throttle body.
10. Pull the airbox towards the engine to release it from its mounting grommets.
11. Detach the intake hose from the throttle body and remove the entire air intake assembly.
   NOTE: K&N Engineering, Inc., recommends that customers do not discard factory air intake.
12. Detach the wiring harness retaining clip from the lower radiator cover.
13. Loosen the hose clamp and detach the stock intake tube from the mass air sensor.
14. Remove the air temperature sensor from the stock intake tube.
15. Remove the mass air sensor retaining clamp.
16. Remove the mass air sensor from the airbox.
17. Remove the two grommets from the airbox mounting points.
18. Attach the 3.5" ID silicone hose (08630) onto the flange of the Air filter element.
19. Install the mass air sensor into the silicone hose with the arrow on the mass air sensor pointing away from the Air filter element.
20. Install the 5/8" ID grommet and the rubber mounted stud into the top plate of the Air filter element.
21. Insert the 1/2" ID grommet into the hole in the K&N® intake tube.
22. On models equipped with a fuel pressure regulator vacuum line, drill out the drill point in the K&N® intake tube using a 3/4" drill bit.
23. On models equipped with a fuel pressure regulator vacuum line, insert the 3/16" ID grommet into the hole drilled in the previous step.
24. Insert the air temperature sensor into the 1/2" ID grommet.
25. Assemble the 90 degree vent, hose mender and vent hose provided as shown.
26. Insert the 90 degree vent into the grommet in the top plate of the filter.
27. Install the 4" ID silicone hose onto the K&N® intake tube.
28. Install a 3.5” ID silicone hose (08630) onto the K&N® intake tube.

29. Attach the angled bracket to the rubber mounted stud using the provided hardware. **Note: Do not tighten completely at this time.**

30. Install the grommets removed in step 17 into the holes in the angled bracket.

31. Assemble the intake tube and Air filter element assemblies.

32. Install the K&N® intake assembly.

33. Install the angled bracket onto the original airbox mounting points.

34. Using the top of the Air filter element as a guide, mark the lower radiator cover a minimum of 1/2” above the filter.

35. Using the Air filter element as a guide, mark a minimum of 1/2” away from the Air filter Element.

36. Release the angled bracket from it’s mounting points and remove the K&N® intake assembly.

37. Loosen and remove the four bolts that retain the upper radiator cover.

38. Remove the upper radiator cover.

39. Loosen and remove the five bolts that mount the lower radiator cover to the bumper cover on the underside of the car.

40. Loosen and remove the two bolts that retain the lower radiator cover to it’s mounting brackets.

41. Detach the courtesy lamp wiring harness from the lower radiator cover.

42. Pull firmly to release the radiator cover from it’s retaining clips.

43. Remove the lower radiator cover.

44. Using the indicated horizontal and vertical marks, connect the upper and side trim lines as shown.

45. Using a 5/16” drill bit, drill a hole where the horizontal and vertical lines intersect.

46. Using a jigsaw, cut along the horizontal and vertical lines. **Note: It will be necessary to clean up the cuts with a file.**

47. Hold the right angled “Z” bracket in place, using a 3/16” drill bit, drill out the five outer holes.
Continued

1. Start the engine with the transmission in neutral or park, and the parking brake engaged. Listen for air leaks or odd noises. For air leaks secure hoses and connections. For odd noises, find cause and repair before proceeding. This kit will function identically to the factory system except for being louder and much more responsive.

2. Test drive the vehicle. Listen for odd noises or rattles and fix as necessary.

3. If road test is fine, you can now enjoy the added power and performance from your kit.

4. K&N Engineering, Inc., requires cleaning the intake system’s air filter element every 100,000 miles. When used in dusty or off-road environments, our filters will require cleaning more often. We recommend that you visually inspect your filter once every 25,000 miles to determine if the screen is still visible. When the screen is not longer visible some place on the filter element, it is time to clean it. To clean and re-oil, purchase our filter Recharger service kit, part number 99-5050 or 99-5000 and follow the easy instructions.

ROAD TESTING:

1. Start the engine with the transmission in neutral or park, and the parking brake engaged. Listen for air leaks or odd noises. For air leaks secure hoses and connections. For odd noises, find cause and repair before proceeding. This kit will function identically to the factory system except for being louder and much more responsive.

2. Test drive the vehicle. Listen for odd noises or rattles and fix as necessary.

3. If road test is fine, you can now enjoy the added power and performance from your kit.

4. K&N Engineering, Inc., requires cleaning the intake system’s air filter element every 100,000 miles. When used in dusty or off-road environments, our filters will require cleaning more often. We recommend that you visually inspect your filter once every 25,000 miles to determine if the screen is still visible. When the screen is not longer visible some place on the filter element, it is time to clean it. To clean and re-oil, purchase our filter Recharger service kit, part number 99-5050 or 99-5000 and follow the easy instructions.

5. Reinstall the K&N® intake assembly then adjust the radiator cover for best fit under the intake tube, then tighten the 4 retaining bolts.

6. Install the angled bracket onto the original airbox mounting points.

7. Cut the air injection vent hose as shown.

8. Attach the air injection hose to the hose mender.

9. Drill out the five inner holes of each bracket.

10. Secure the flap to the brackets with the hardware provided.

11. Reinstall the lower radiator cover.

12. Reattach the courtesy lamp wiring harness to the lower radiator cover.

13. Secure the lower radiator cover to the bumper cover and mounting brackets using the bolts removed in steps 39 and 40.

14. Reinstall the upper radiator cover and secure with the original retaining bolts. Do not tighten completely.

15. Secure the flap to the brackets with the hardware provided.

16. Reconnect the vehicle’s negative battery cable. Double check to make sure everything is tight and properly positioned before starting the vehicle.

17. The C.A.R.B. exemption sticker, (attached), must be visible under the hood so that an emissions inspector can see it when the vehicle is required to be tested for emissions. California requires testing every two years, other states may vary.

18. It will be necessary for all K&N® high flow intake systems to be checked periodically for realignment, clearance and tightening of all connections. Failure to follow the above instructions or proper maintenance may void warranty.
