Congratulations, you have purchased the finest air filter that money can buy. With proper care, this filter can last many seasons. This filter can be used in a stock machine, with no modifications required. If any engine modifications have been made tuning/jetting adjustments may be required. There are special installation instructions, so please follow the procedures outlined below to ensure the K&N® air filter seals properly.

INSTALLATION:

1. Remove the stock air filter.
2. Clean all sealing surfaces in the air box including any necessary areas inside the air-boot ensuring you start as clean as possible.
3. Apply supplied grease around the perimeter of the channel on the bottom of the air filter as shown (opposite side of engravings). (Fig.1).
4. Place air filter in air box base. (Fig. 2)
5. Place air box lid back on air box base and fasten tight.

Note: The plastic cage in the top will still be used in the installation of the K&N air filter. (Fig. 3)

THESE INSTRUCTIONS MUST BE FOLLOWED EVERY TIME THE FILTER IS SERVICED, OTHERWISE THE FILTER MAY NOT SEAL, AND DAMAGE TO THE ENGINE COULD RESULT.
